

QuickSign

Practice ASL. Know what to fix.

Real-time feedback for independent ASL practice.

Beta

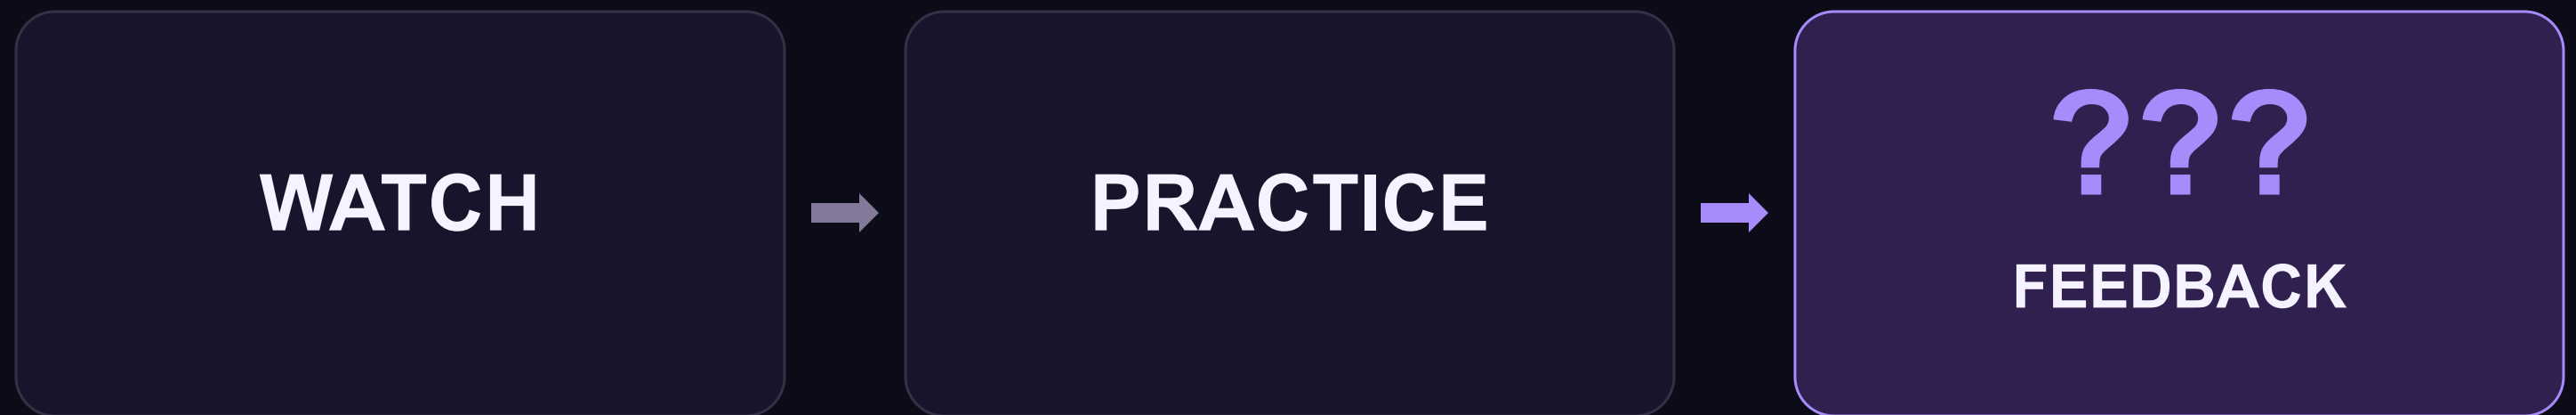

Founded 2026

Lahore, Pakistan

Practice leaves a question

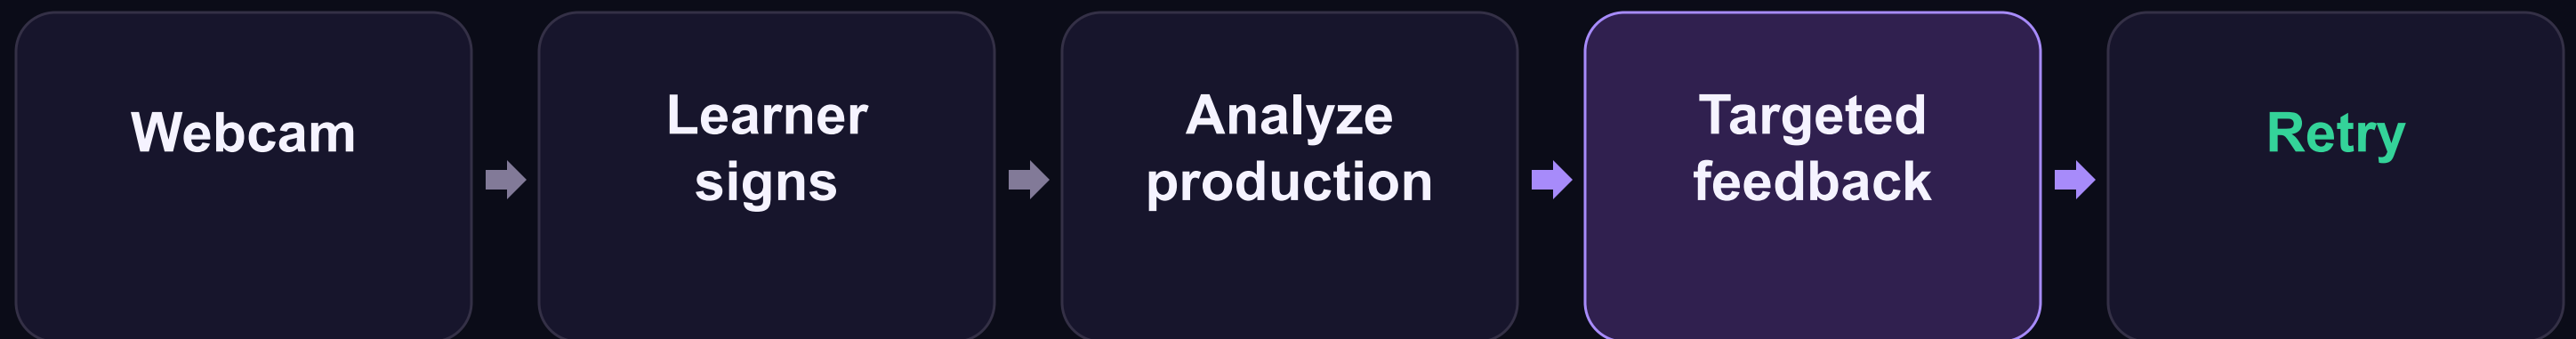

Watching an ASL lesson does not tell a learner whether their own attempt is correct.

For L2 ASL learners and beginners practicing independently.

The missing feedback layer

QuickSign turns webcam practice into a feedback loop.

Recognition is designed to run on-device.

Webcam video does not need to be sent to a server for recognition.

Feedback on your signing

QuickSign

Watch → Perform → Receive feedback → Retry

Designed to complement Deaf instructors and ASL educators.

The goal: move learners from watching signs to confidently producing them.

Early beta activity

As of September 10, 2026

135 distinct users across core app-use events; known internal/test accounts excluded.

16 and 14 are unique users in the respective tracked events.

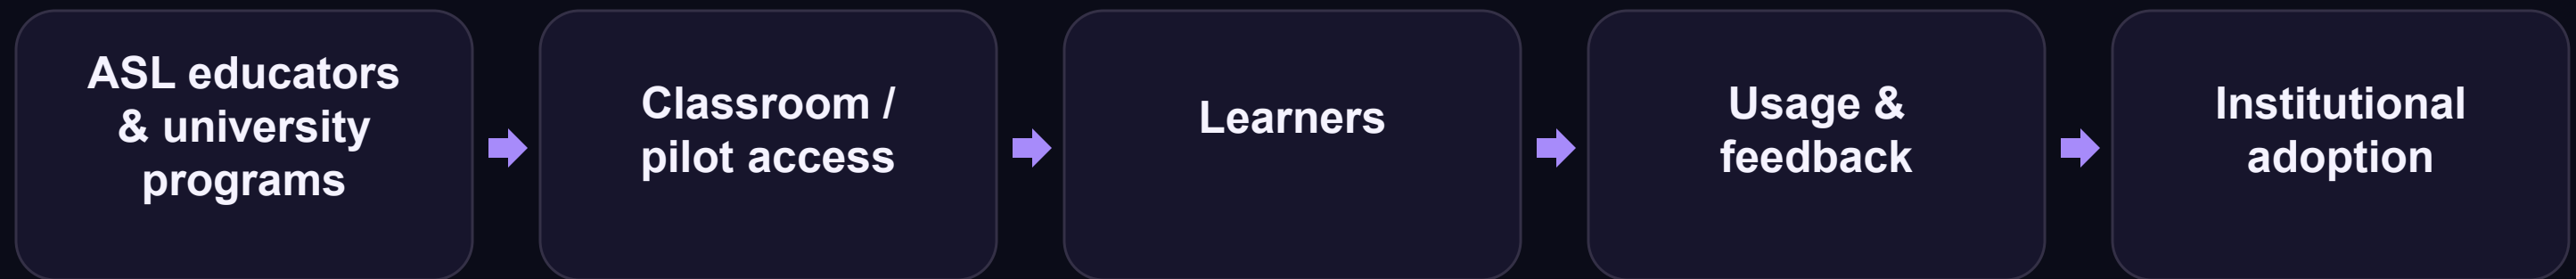

4 completed signups

Pre-revenue

Bootstrapped

Start with structured ASL programs

B2B2C: current hypothesis

Target: universities and colleges. No paying institutional customers yet.

Early educator feedback

An Oregon School for the Deaf outreach specialist tested the camera experience, responded positively to the interactive concept and asked us to clarify the learner segment.

Early feedback only. No endorsement, partnership or pilot.
